

Suggested changes in Wet and Dry Deposition Monitoring Manual

- Revision of manual in progress
- IC and AAS will be included as recommended methods
- H₂O₂ wet chemistry method will be added to TCM sampling method for SO₂
- Include filter methods for SO₂ and NO₂ sampling in regional background air? ⇒ lower detection limits
- Re-design of bulk collector

Bulk sampler re-design

Suggested changes in Data reporting template

- For precipitation results R1 and R2 should be reported
- Detection limits will be clearly indicated in the template
- Data result presentation will only include results (mmol/l; $\mu\text{g}/\text{m}^3$) and remarks
